Applicant's election of the species recited in claim 89 in the reply filed on 5/16/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 87-89 rejected under 35 U.S.C. 102(b) as being anticipated by Bening et al 1990.

Bening et al 1990 teach nanotubes reacted with potassium chlorate in sulfuric acid (p. 420, "experimental section", under "oxidation"). Carboxyl groups are specified ("results and discussion" p. 420-21).

Applicants' argue in the paper filed 1/10/05 that Bening et al 1990 does not teach the claimed secondary functionalization. However, process limitations are not considered patentable during the prosecution of composition claims before the USPTO. Further, the claimed secondary functionalization is not necessary for the carboxyl moieties of claim 89.

The enablement rejection under 35 USC 112 paragraph one is withdrawn as not being germane to the elected species.

No claims allowed.
